1. Getting Started

Signing in and out

1. Open the application address in your browser. You will see the login page.
2. Enter your username and password, then sign in. You land on the **Dashboard**.
3. To sign out, use the logout button at the bottom of the left sidebar.

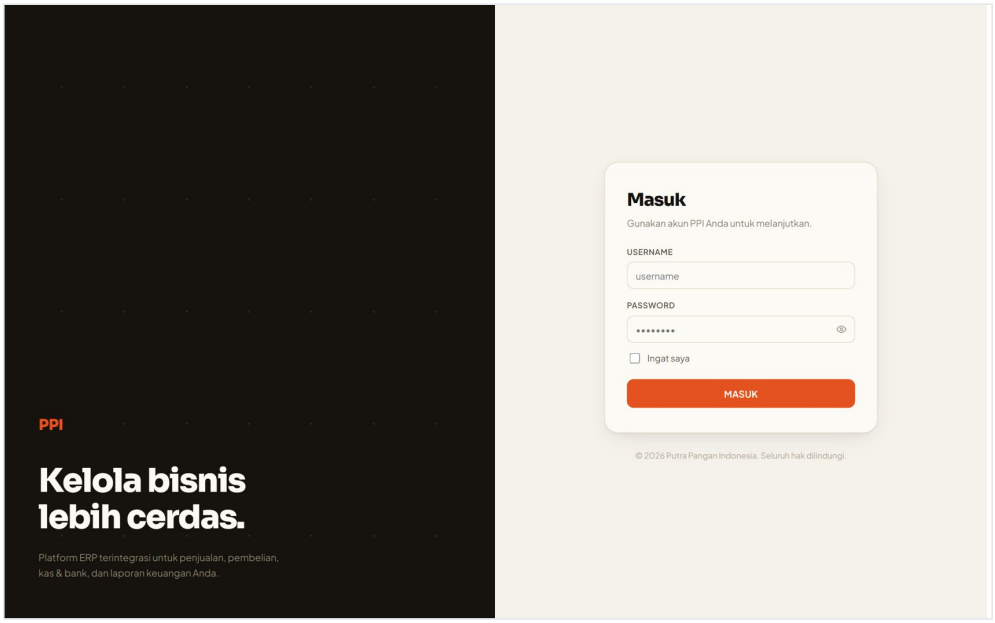

Figure 1. The login page.

If your account has been deactivated by an administrator, you will be signed out automatically. Contact your administrator to reactivate it.

Finding your way around

The left sidebar is the main navigation. Hover over or click a group to open its sub-menu.

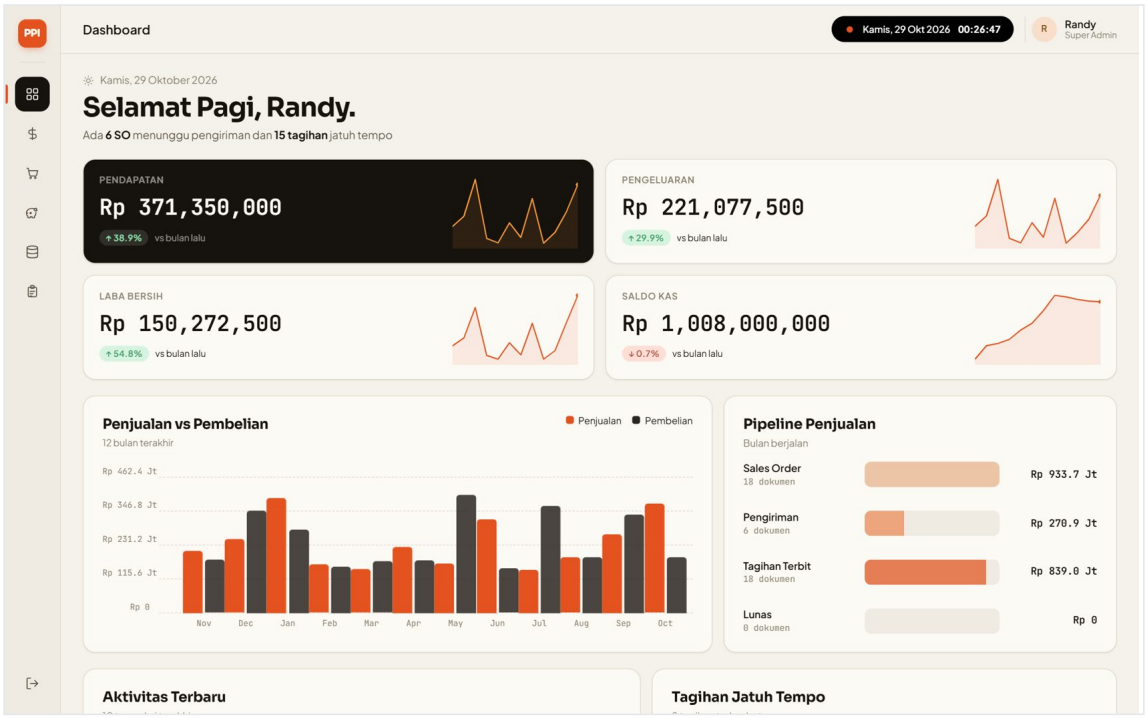

Figure 2. The Dashboard: income, expenses, net profit and cash balance, sales vs purchases, the sales pipeline and invoices coming due.

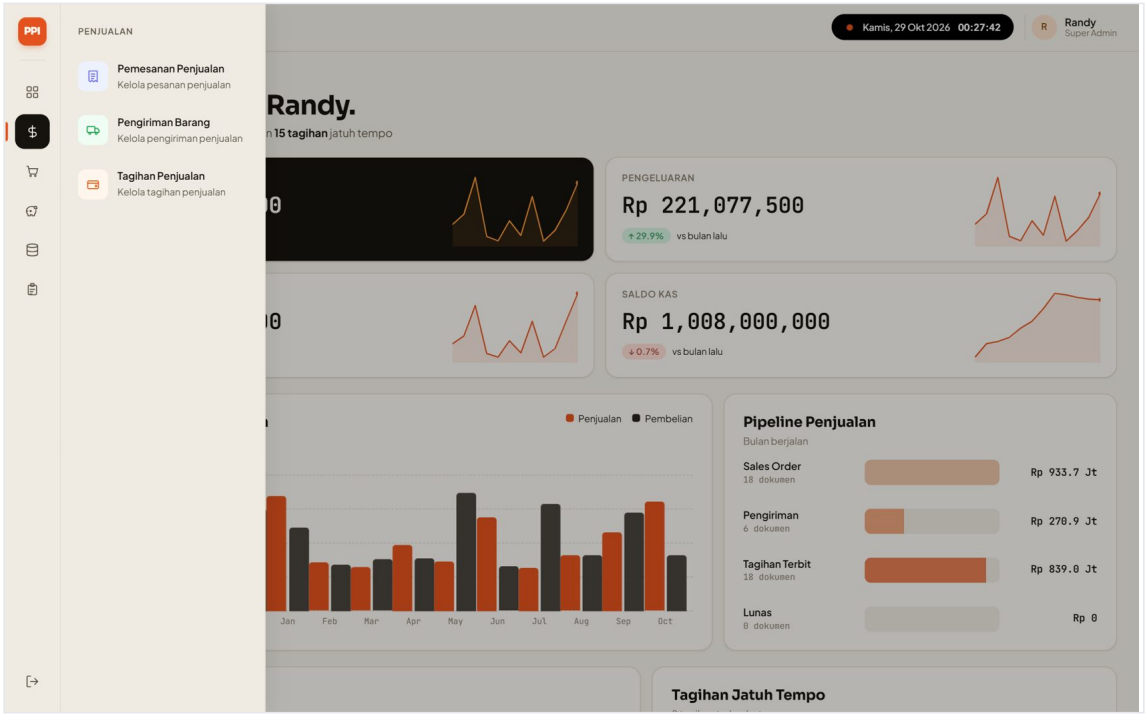

Figure 3. Clicking the Penjualan icon opens its sub-menu. Pembelian and Finance work the same way.

Sidebar item	Contains
Dashboard	Overview: sales vs purchases, receivables and payables due, and recent activity.
Penjualan (Sales)	**Pemesanan Penjualan** (Sales Orders), **Pengiriman Barang** (Deliveries), **Tagihan Penjualan** (Sales Invoices)

Sidebar item	Contains
Pembelian (Purchasing)	**Pemesanan Pembelian** (Purchase Orders), **Penerimaan Barang** (Goods Receipts), **Tagihan Pembelian** (Purchase Invoices)
Finance	**Hutang** (Payables), **Piutang** (Receivables), **Kas & Bank** (Cash & Bank), **Biaya** (Expenses)
Master Data	Products, warehouses, contacts, users, roles, chart of accounts and account settings
Laporan (Reports)	Financial statements, aging reports, journal and activity log

> **Tip**
> You only see the menus and buttons your role allows. If a menu or a button such as **Batal** or **Buat Tagihan** is missing, ask your administrator to check your role under **Master Data** → **Hak Akses**.

Working with lists

Every module opens on a list page. Lists share the same tools:

- **Search** by document number, contact name and similar fields.
- **Status filter** (e.g. **Semua** = all statuses) and date range filters **Dari Tanggal** / **Sampai Tanggal**.
- **Per** page size and **Halaman** (page) navigation.
- **Ekspor** to download the current list as a spreadsheet.
- Click a row to open the document detail page, where all actions (open, close, cancel, print) live.

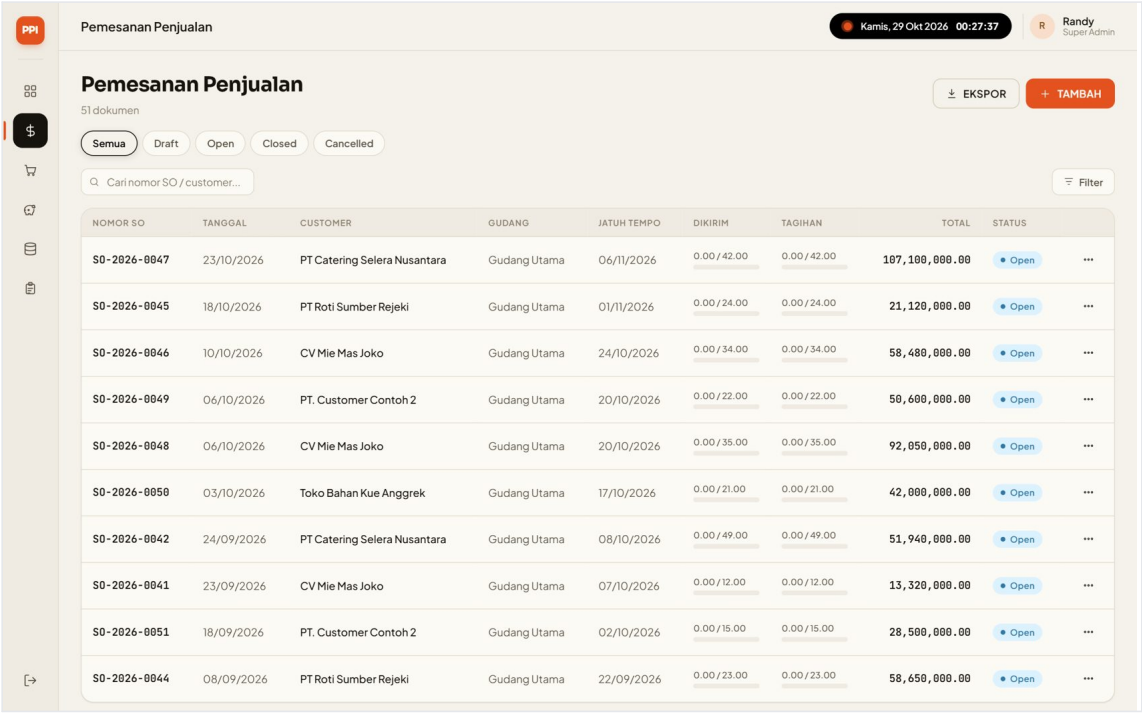

Figure 4. A typical list page: status tabs, search, filter, Ekspor and the TAMBAH (create) button. Progress bars show how much has been shipped and invoiced.

Document numbers

Numbers are generated automatically when a document is saved, using the pattern **PREFIX-COMPANY-YEAR-SEQUENCE**, for example **SO-PPI-2026-0001**.

Prefix	Document	Prefix	Document
SO	Sales Order	PO	Purchase Order
DO	Delivery Order	GR	Goods Receipt
SI	Sales Invoice	PI	Purchase Invoice
EXP	Expense	—	Payments, cash and journals also get their own numbers

Document statuses

All business documents follow the same idea: you prepare a **Draft**, then confirm it. Confirming is what affects stock, balances and the books.

Status	Meaning
Draft	Work in progress. Can be edited freely; only light validation. No effect on stock or accounting.
Open	Confirmed order, invoice or expense. Fully validated. Can no longer be edited.
Finished	Delivery or goods receipt completed. Stock has moved.
Partial / **Paid**	Invoice or expense has been partly / fully paid.
Closed	Order is complete (all items shipped / received), or closed manually.
Posted	Cash & bank transaction confirmed and recorded.
Cancelled	Voided. Kept for history, no longer counts.

> **Important**
> Only **Draft** documents can be edited. Check everything before you confirm (open, finish or post) a document.

Printing

Orders, deliveries, goods receipts, invoices and expenses have a **Cetak** (Print) button on their detail page. It opens a print-ready document; use your browser's print dialog to print or save as PDF.

Figure 5. Print preview of a sales order. Use Cetak / Simpan PDF to print or save it.

2. Master Data

Master Data holds the reference information every other module uses. Open **Master Data** from the sidebar and choose a tab. Set these up before entering transactions.

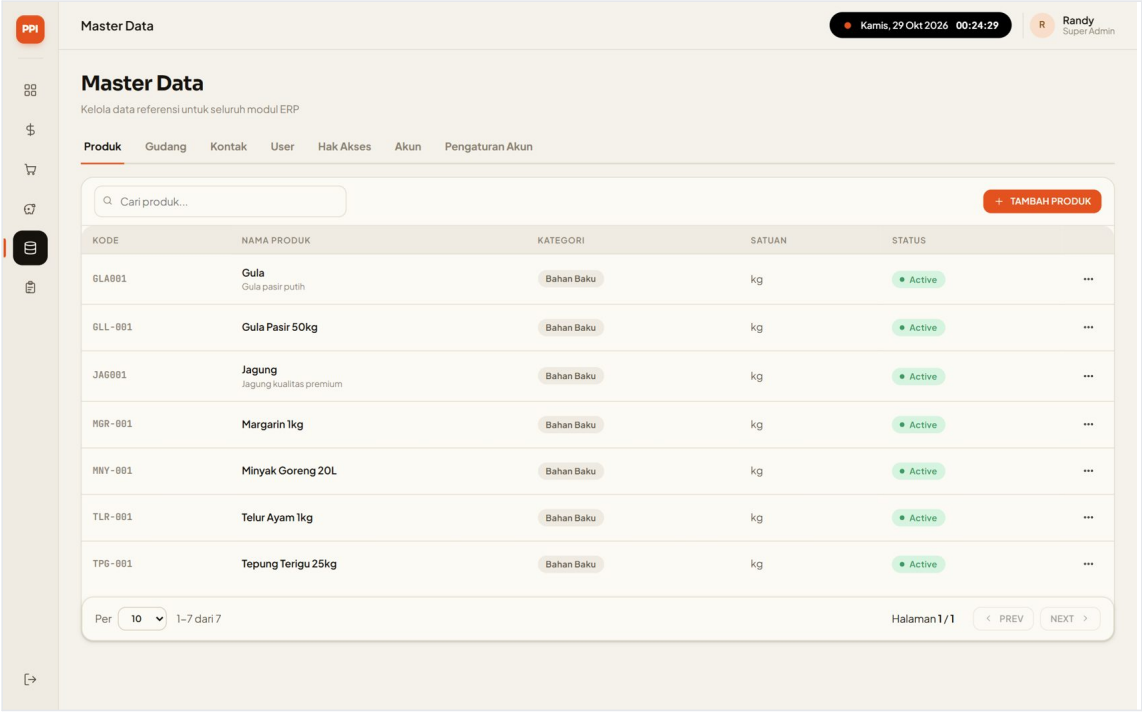

Figure 6. Master Data, Produk tab. The other tabs are listed in the table below.

Tab	What it is for
Produk	Products, units and product categories, with stock per warehouse and batch history.
Gudang	Warehouses, their stock and batches. Also where you transfer stock and adjust stock.
Kontak	Customers, suppliers and employees (used as sales persons and recipients).
User	Application users, their role, status and password.
Hak Akses	Roles and the permissions each role has.
Akun	Chart of accounts, grouped by category (cash & bank, receivable, inventory, revenue, expenses…).
Pengaturan Akun	Default accounts the system posts to automatically.

Recommended setup order

1. **Akun**: review the chart of accounts and add any accounts you need.
2. **Pengaturan Akun**: assign every default account (see below). Transactions cannot post correctly until these are set.
3. **Gudang**: create your warehouses.
4. **Produk**: create units and categories, then products.
5. **Kontak**: add customers, suppliers and employees.

6. **Hak Akses** and **User**: create roles, tick their permissions, then create users and assign roles.

Account settings (Pengaturan Akun)

These defaults tell the system which account to use when it creates journal entries for you:

Group	Settings
Assets	Kas, Rekening Bank, Piutang Usaha, Persediaan Barang, PPN Masukan, Uang Muka Pembelian
Liabilities	Hutang Usaha, Hutang Belum Ditagih (GRNI), PPN Keluaran, Uang Muka Penjualan
Equity	Laba Ditahan, Ekuitas Saldo Awal
Income & expense	Pendapatan Penjualan, Diskon Penjualan, Retur Penjualan, HPP, Diskon Pembelian, Retur Pembelian, Penyesuaian Persediaan (Lebih / Kurang), Selisih Pembulatan (Untung / Rugi)

Products

- Use **Tambah Produk** on the Produk tab to create a product. Choose its unit and category, and its inventory, sales and COGS accounts.
- Open a product to see stock per warehouse, its batches and every stock transaction.
- Products can be deactivated instead of deleted, so history stays intact.

Warehouses, transfers and stock adjustments

Open a warehouse from the **Gudang** tab to see its stock and batches. Two stock actions are available there:

- **Transfer Gudang**: move quantities of specific batches from this warehouse to another one.
- **Penyesuaian Stok**: correct stock after a physical count. Increases post to *Penyesuaian Persediaan (Lebih)* and decreases to *(Kurang)*.

> **Tip**
> Stock is tracked by **batch**. Every goods receipt creates batches, and deliveries take stock from the batches you choose. Use clear batch numbers (e.g. supplier lot numbers).

Users and roles

- **Hak Akses**: create a role with **Tambah Role Baru**, then tick permissions per module. Each module has *view*, *create*, *edit* and *delete* (cancel) permissions.
- **User**: create a user with **Tambah User**, assign a role, and activate or deactivate them.
- Passwords are changed separately from profile details; leaving the password empty when editing a user keeps the current one.

3. Sales (Penjualan)

Sales follows a three-document chain. Each document is created from the one before it, so quantities and prices carry over automatically.

Sales Order (SO) → Delivery (DO) → Invoice (SI) → Payment (Piutang)

3.1 Sales Order (Pemesanan Penjualan)

Draft → Open → Closed

Draft or Open orders can also be Cancelled (see rules below).

Create a sales order

1. Go to **Penjualan → Pemesanan Penjualan** and click **Tambah**.
2. Choose the customer (or **Tambah customer baru**), warehouse, sales person, date and payment terms (**Cash**, **COD**, **Net 7/14/30/45**, or **Manual (pilih tanggal)** for a custom due date).
3. Add products with **Tambah Produk**: quantity, selling price (**Harga Jual**) and discount.
4. Optionally add extra costs: **Biaya Tambahan (Tagih ke Customer)** are charged to the customer on the invoice; **Biaya Tambahan (Internal Only)** are your own costs and are not billed.
5. Optionally enter a down payment and the cash/bank account that received it.
6. Click **Simpan Draft** to keep working later, or **Simpan** to save and open (confirm) it right away.

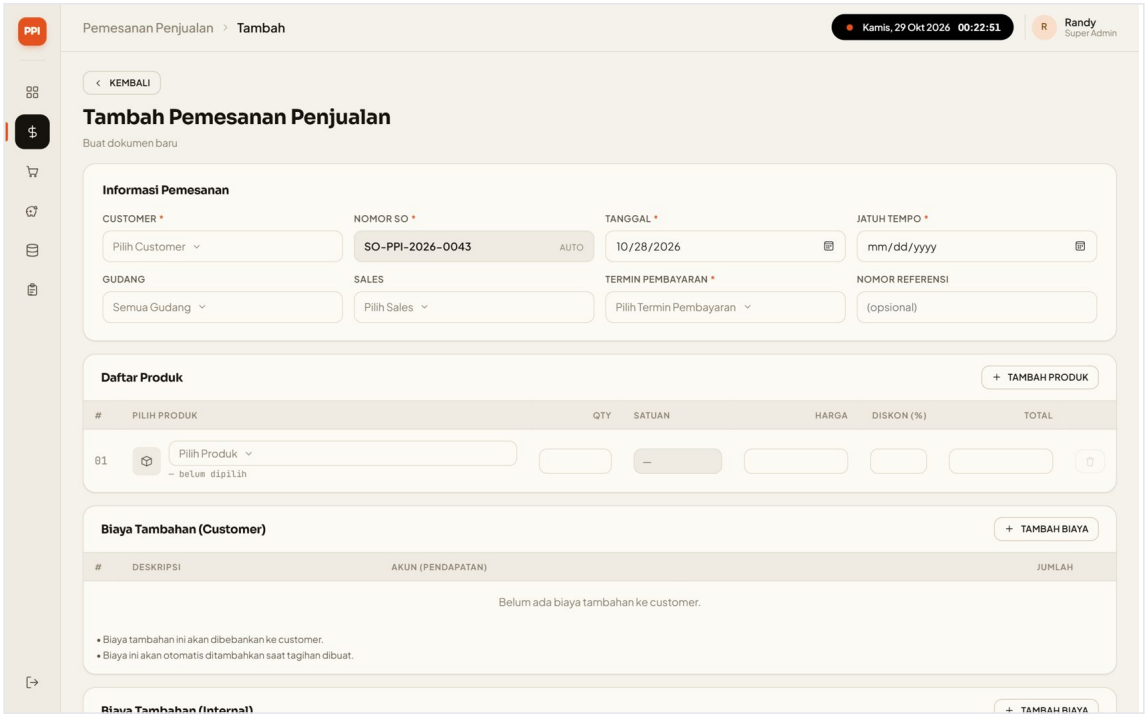

Figure 7. Creating a sales order: order details, products, and the two kinds of additional costs.

Actions on the detail page

Button	When available	What it does
Buka SO	Draft	Confirms the order. Customer and at least one product are required, and every customer charge needs an account. If a down payment was entered, it is recorded in Kas & Bank.
Buat Pengiriman	Open	Creates a draft delivery order for the remaining quantities.
Buat Tagihan	Open or Closed, with shipped items not yet invoiced	Creates a draft sales invoice.
Tutup SO	Open	Closes the order manually (e.g. customer will not take the rest).
Batal Pemesanan	Draft, or Open with no deliveries or invoices	Cancels the order and reverses its down payment.
Cetak	Any	Prints the order.

An order closes automatically once every item has been fully shipped.

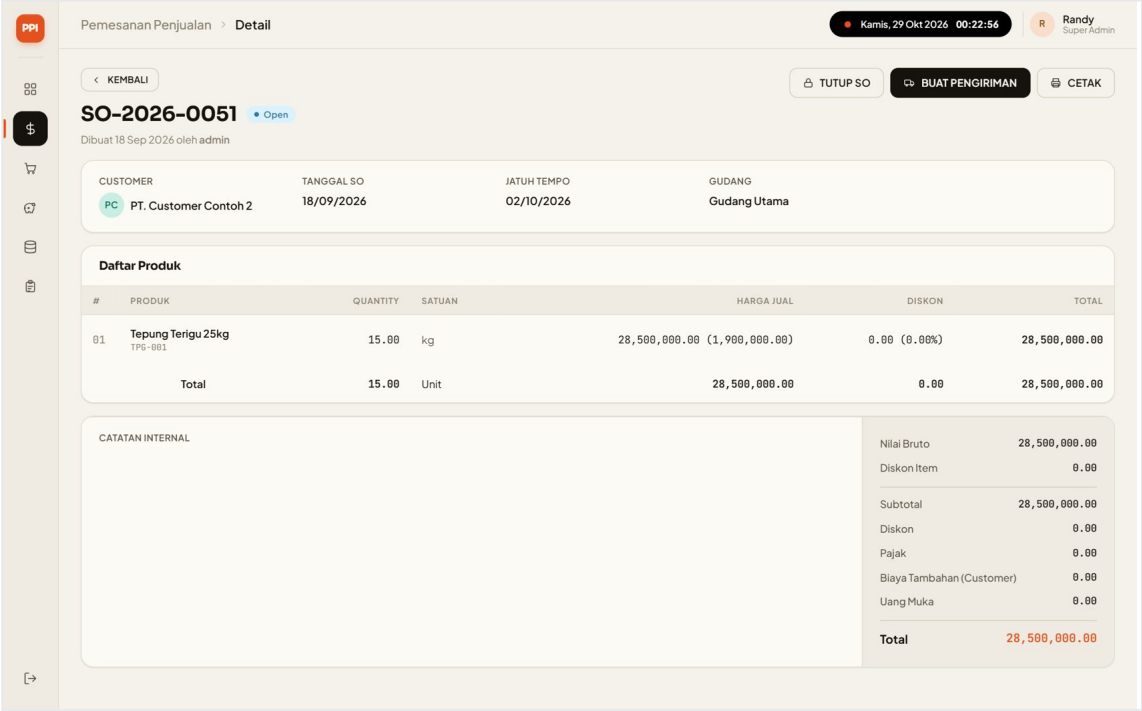

Figure 8. An open sales order. The action buttons at the top right change with the order status.

3.2 Delivery Order (Pengiriman Barang)

Draft → Finished

1. From an open sales order, click **Buat Pengiriman** and confirm. A draft delivery is created.
2. Open the draft and click edit (**Edit Pengiriman Barang**). Adjust the quantity shipped (**Quantity Dikirim**) per item.
3. For each item, pick the **Batch**(es) the goods come from. Batch quantities must add up to the item quantity.

4. Add any delivery costs and notes (**Catatan Pengiriman**).
5. Click **Simpan Draft** to save, or **Selesaikan** to finish the delivery.

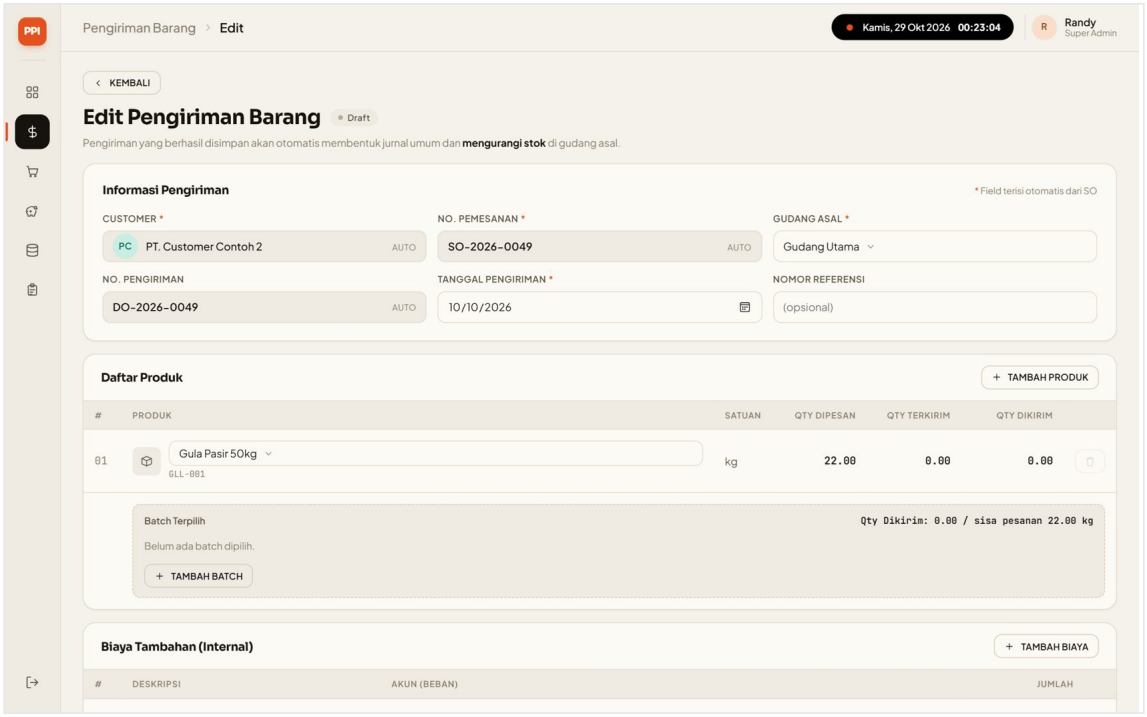

Figure 9. Editing a draft delivery: shipped quantity per item, then TAMBAH BATCH to choose which batches the goods come from.

When a delivery is finished, stock is deducted from the chosen batches, the cost of goods sold is recorded, the order's shipped quantities are updated, and delivery costs billed by a third party (**Pihak Ketiga**) automatically create a draft expense in **Biaya**.

- Drafts do not check stock, so you can prepare a delivery before goods are available. Stock is checked when you finish.
- You may ship more than ordered; the order simply closes once everything is covered.

> **Important**
> A **Finished** delivery cannot be cancelled in the current version. Double-check quantities and batches before clicking **Selesaikan**. Only **Draft** deliveries can be cancelled with **Batal Pengiriman**.

3.3 Sales Invoice (Tagihan Penjualan)

Draft → Open → Partial → Paid

Draft, or Open with no payment yet, can be Cancelled.

1. From the sales order, click **Buat Tagihan**. A draft invoice is created with the customer, payment terms, discount, tax and customer charges copied from the order.
2. Edit the draft: select the delivered items to bill. You can only invoice quantities that have been delivered and not yet invoiced.
3. Click **Buka** to confirm the invoice. It becomes a receivable under **Finance** → **Piutang**, and any down payment from the order is deducted.
4. Record customer payments in **Piutang** (section 5.1).

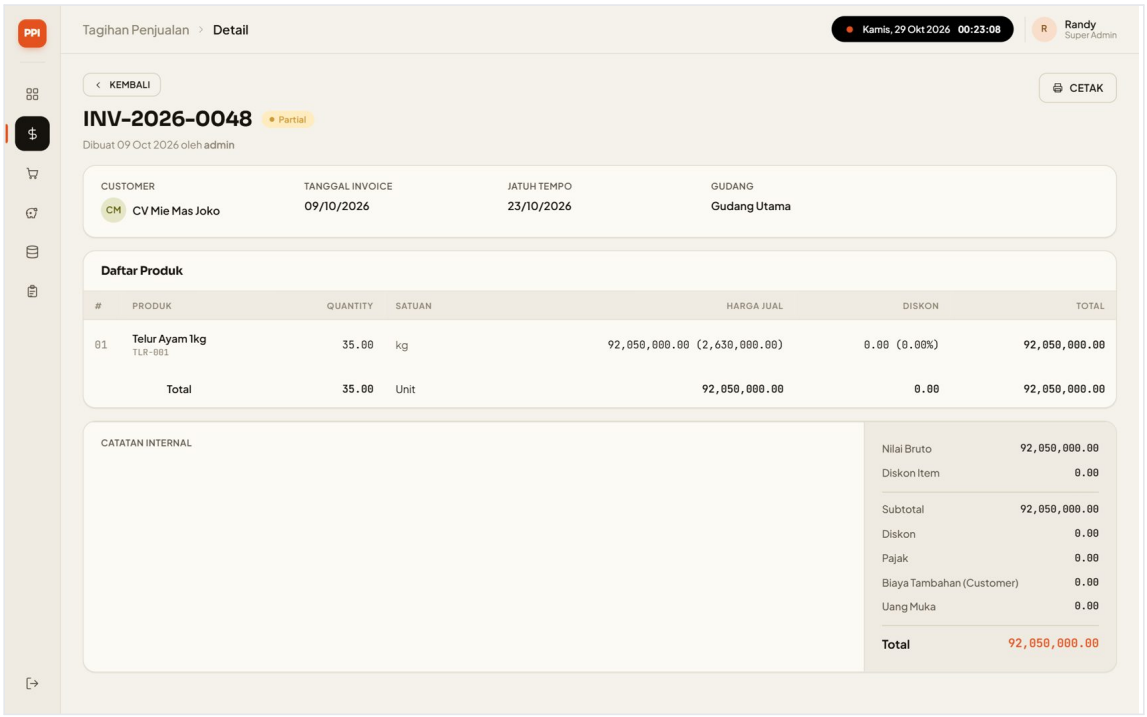

Figure 10. A partially paid sales invoice with its totals summary.

Batal Tagihan cancels an invoice that is Draft, or Open with no payment received. If payments exist, void them in Piutang first.

4. Purchasing (Pembelian)

Purchasing mirrors sales:

Purchase Order (PO) → Goods Receipt (GR) → Invoice (PI) → Payment (Hutang)

4.1 Purchase Order (Pemesanan Pembelian)

Draft → Open → Closed

Draft or Open orders with no goods receipt can be Cancelled.

1. Go to **Pembelian** → **Pemesanan Pembelian** and click **Tambah**.
2. Choose the supplier (or **Tambah supplier baru**), the receiving warehouse, date and payment terms.
3. Add products with quantity, purchase price (**Harga Beli**) and discount.
4. Add extra costs under **Biaya Tambahan (Landed Cost)**. For each cost, set **Ditagih Oleh** (billed by): **Supplier** (on the supplier's invoice), **Pihak Ketiga** (a third party, e.g. a freight company) or **Internal**.
5. Optionally enter a down payment.
6. Save with **Simpan Draft**, or **Simpan** to save and confirm it. A draft can be confirmed later with **Buka PO**.

Button	When available	What it does
Buka PO	Draft	Confirms the order.
Buat Penerimaan	Open, not fully received	Creates a draft goods receipt.
Buat Tagihan	Open or Closed, with received items not yet invoiced	Creates a draft purchase invoice.
Tutup PO	Open	Closes the order manually.
Batal Pemesanan	Draft, or Open with no goods receipts	Cancels the order.

The order closes automatically once every item has been fully received.

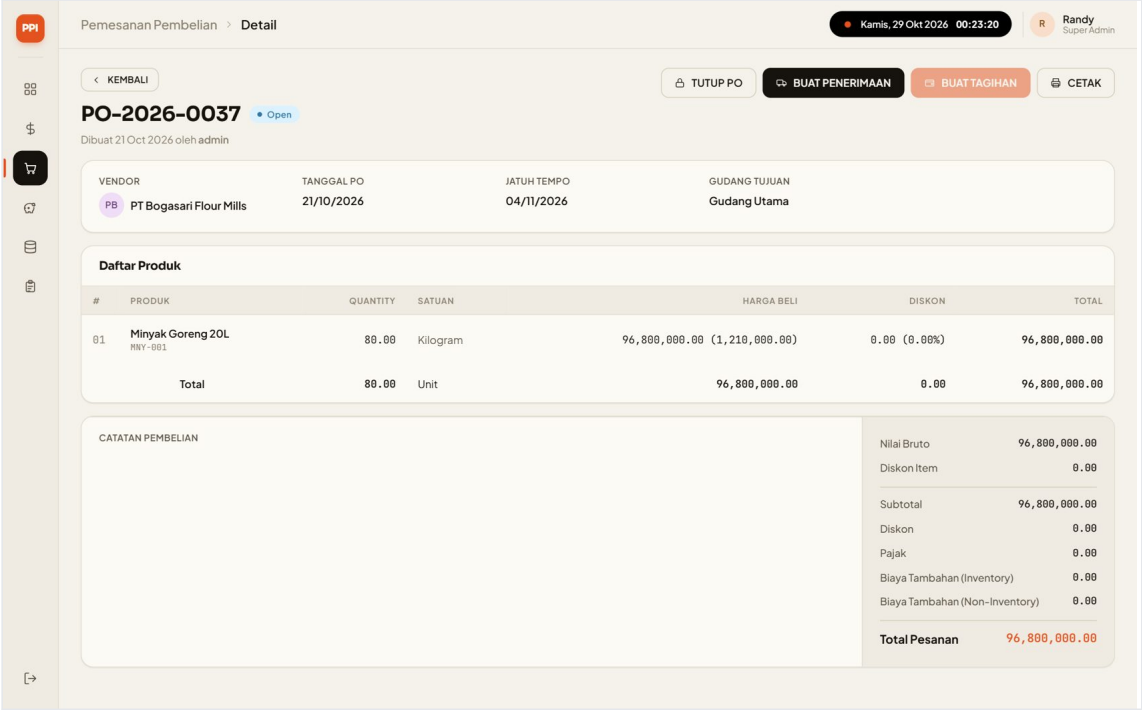

Figure 11. An open purchase order with TUTUP PO, BUAT PENERIMAAN, BUAT TAGIHAN and CETAK.

4.2 Goods Receipt (Penerimaan Barang)

Draft → Finished

1. From the open purchase order, click **Buat Penerimaan**. A draft receipt is created.
2. Edit the draft (**Edit Penerimaan Barang**). For each item enter the quantity actually received (**Diterima**) against the expected quantity (**Ekspektasi**). Any difference is shown as shrinkage (**Susut**).
3. Enter a **Nomor Batch** for each item. Batch numbers must be unique per product.
4. Record the condition of the goods in **Catatan Penerimaan**.
5. Click **Selesaikan** to finish.

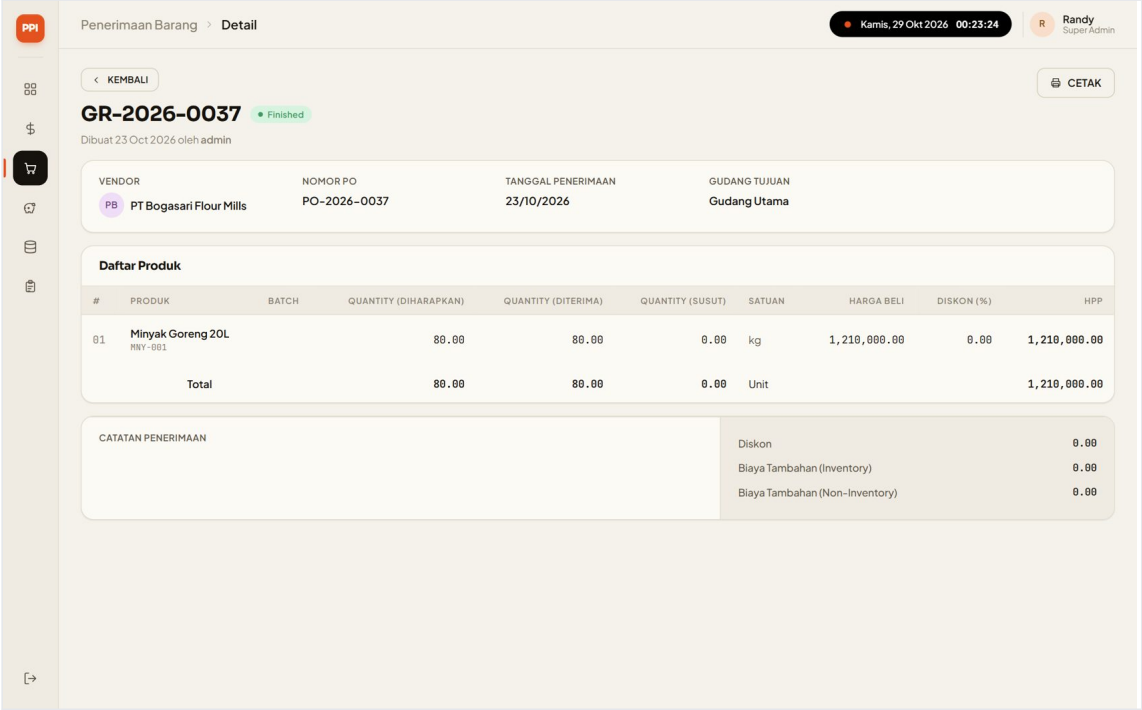

Figure 12. A finished goods receipt showing expected, received and shrinkage quantities.

Finishing a receipt adds the stock as new batches, calculates the unit cost (HPP) by spreading landed costs and discounts across the items, updates the order's received quantities, and creates a draft expense in **Biaya** for each cost billed by **Pihak Ketiga**.

> **Important**
> A **Finished** goods receipt cannot be cancelled in the current version. Check quantities, batch numbers and costs before clicking **Selesaikan**.

4.3 Purchase Invoice (Tagihan Pembelian)

Draft → Open → Partial → Paid

Draft, or Open with no payment yet, can be Cancelled.

1. From the purchase order (or goods receipt list), click **Buat Tagihan**.
2. Edit the draft: select the received items being billed and match the supplier's invoice (reference number, tax, discount).
3. Click **Buka** to confirm the invoice. It becomes a payable under **Finance** → **Hutang**, and any down payment is deducted.
4. Pay it from **Hutang** (section 5.2).

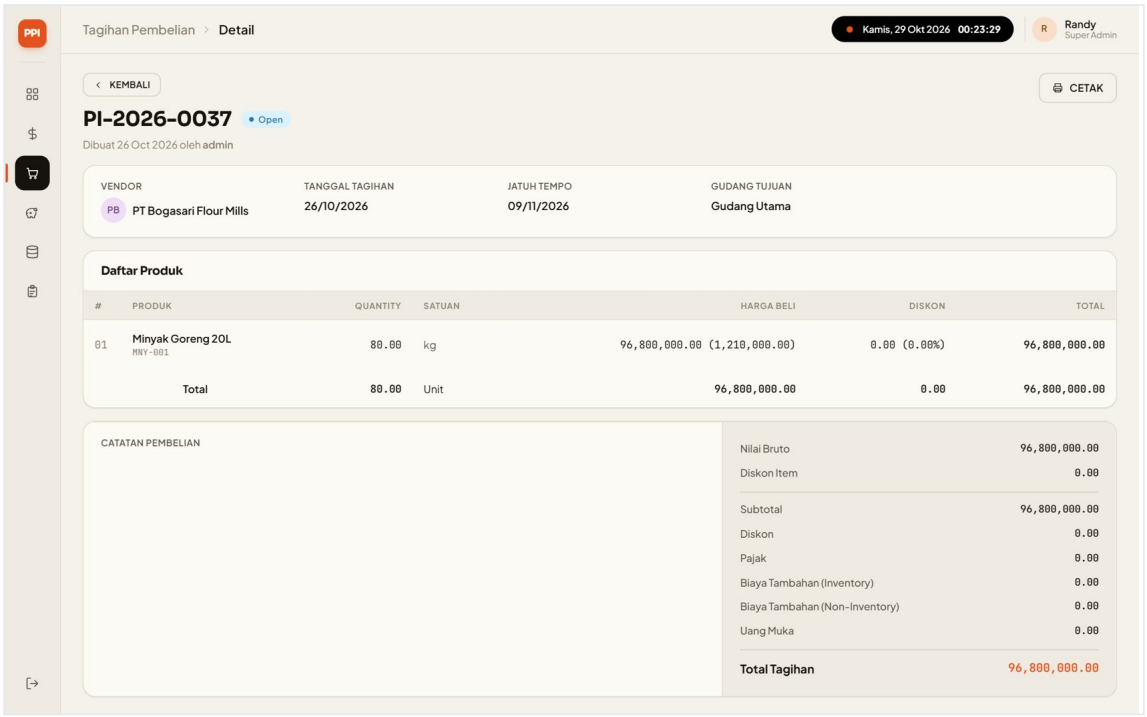

Figure 13. An open purchase invoice.

5. Finance

5.1 Receivables (Piutang)

Piutang lists every open customer invoice with its invoice date, due date (**Jatuh Tempo**), amount (**Jumlah Invoice**) and outstanding balance (**Sisa Tagihan**).

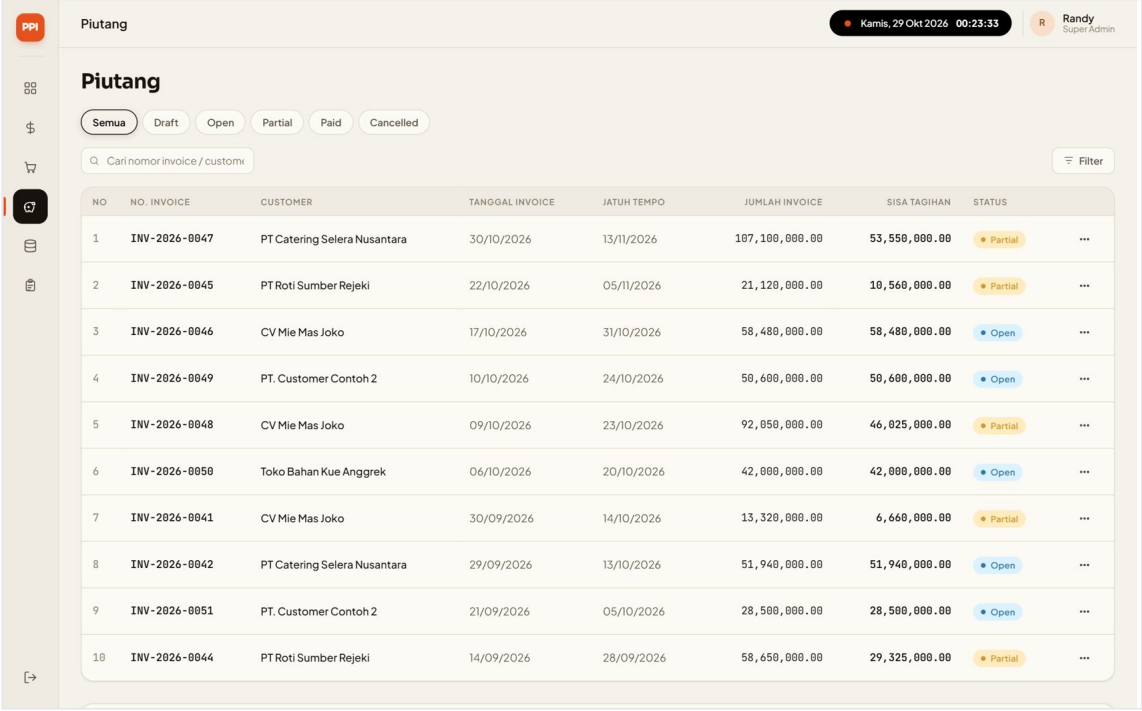

Figure 14. The Piutang list, filtered with the status tabs.

Record a customer payment

1. Open the invoice from the Piutang list and click **Tambah Pembayaran**.
2. Fill in **Tanggal Pembayaran**, the receiving **Akun Kas / Bank**, **Metode Pembayaran** (**Tunai**, **Transfer Bank** or **Kartu Kredit**), an optional **No. Referensi** (e.g. transfer reference), the **Jumlah** and a **Catatan**.
3. Save. The invoice becomes **Partial**, or **Paid** when nothing remains.

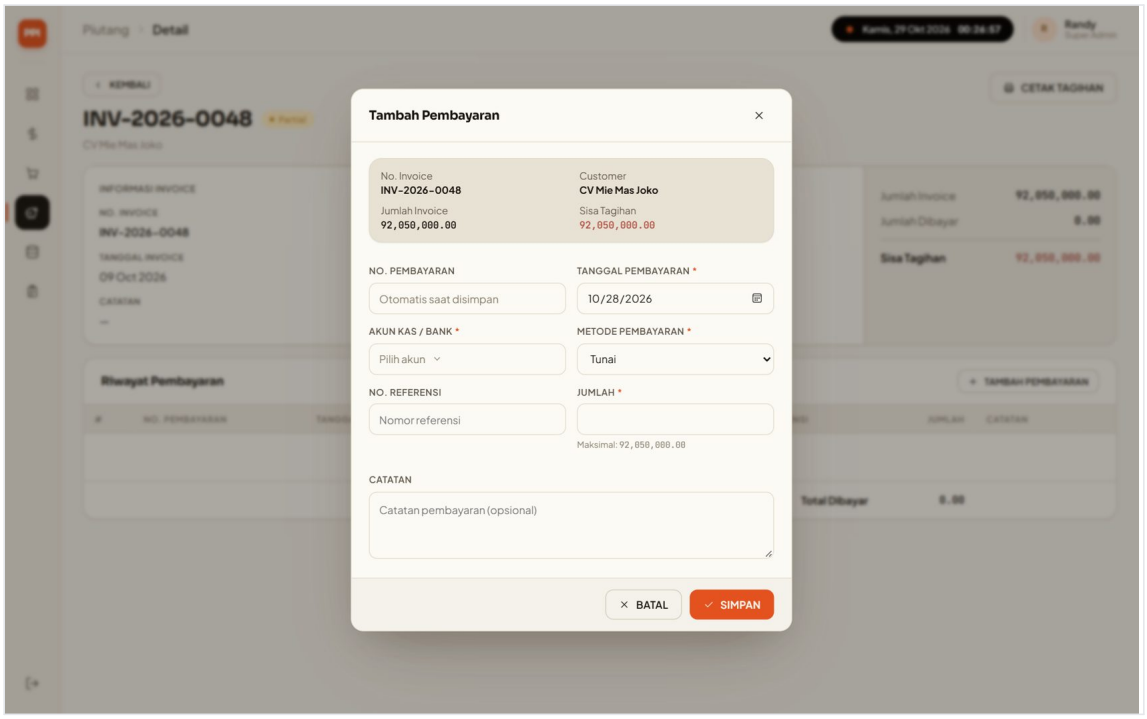

Figure 15. The Tambah Pembayaran dialog.

Void a payment

If a payment was recorded by mistake, use **Void** on that payment. The amount is added back to the invoice and the accounting entry is reversed. Voided payments stay in the payment history, marked as voided, so there is always an audit trail.

5.2 Payables (Hutang)

Hutang works the same way for money you owe. It lists open purchase invoices *and* open expenses. Open one, click **Tambah Pembayaran**, fill in the same fields as above and save. Payments can also be voided the same way.

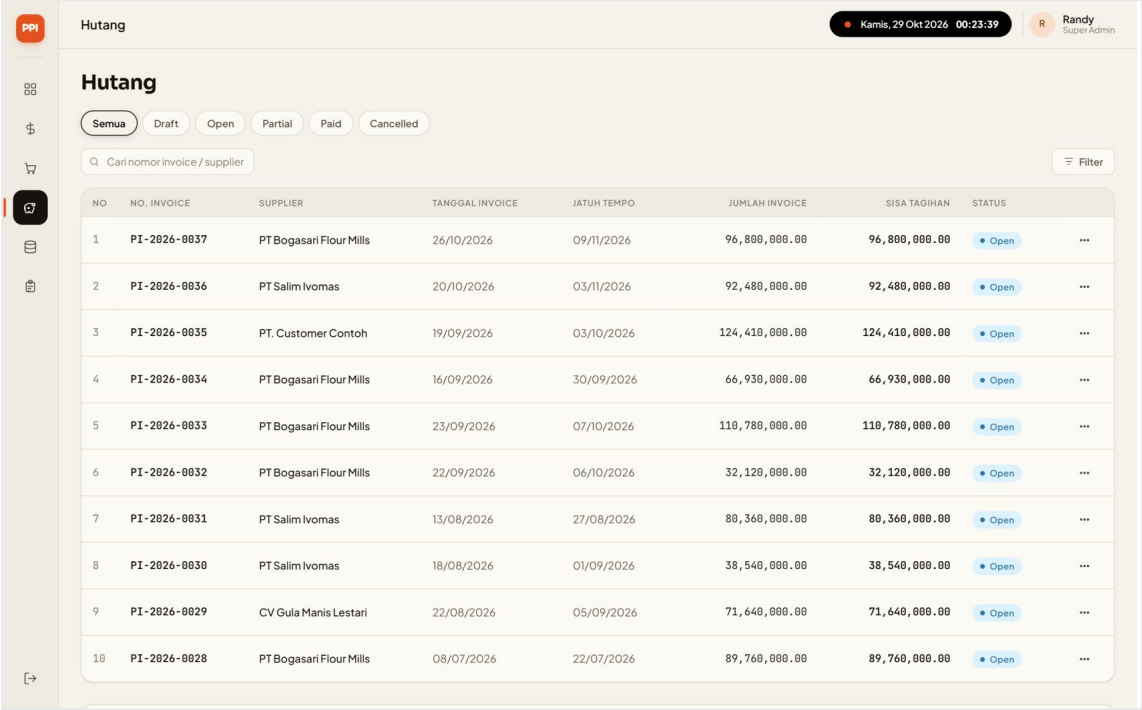

Figure 16. The Hutang list.

5.3 Cash & Bank (Kas & Bank)

The Kas & Bank page lists your cash and bank accounts with their balances. Add a new account with **Tambah Rekening** (name, account code, category and notes).

Open an account to see its transactions and available balance (**Total Saldo Tersedia**), and to record:

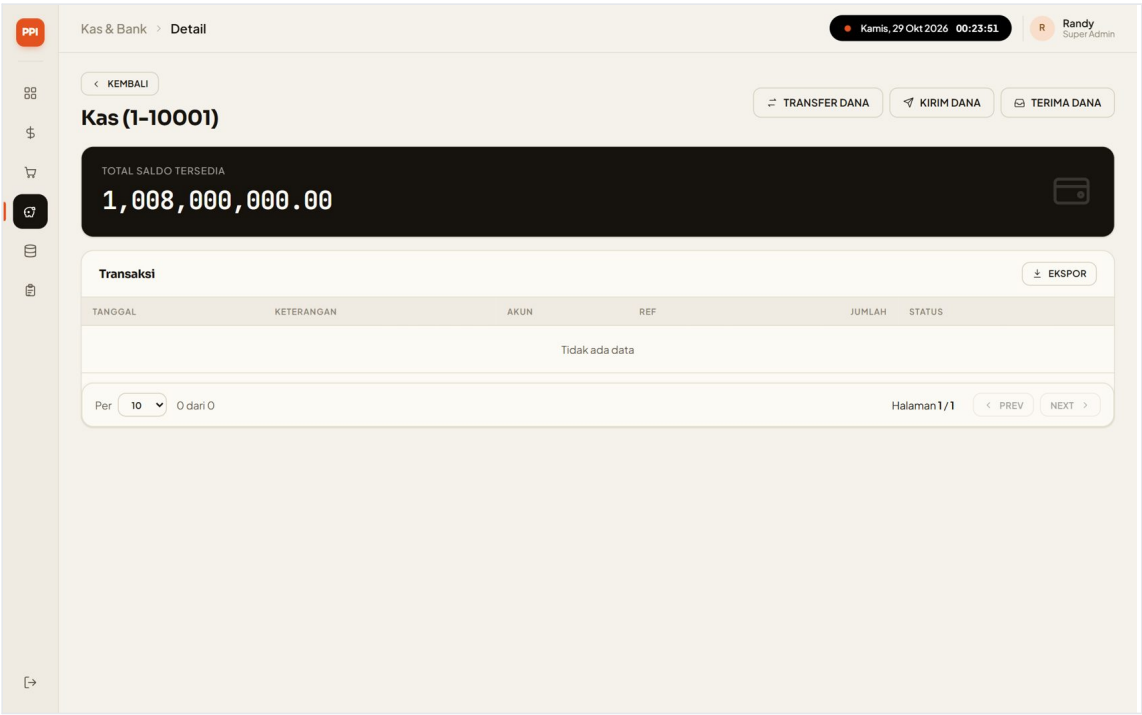

Figure 17. A cash account with the TRANSFER DANA, KIRIM DANA and TERIMA DANA buttons.

Action	Use it for
Kirim Dana (Send)	Money going out of this account that is not an invoice payment, e.g. paying a bill directly. Allocate the amount to one or more accounts.
Terima Dana (Receive)	Money coming in that is not a customer invoice payment, e.g. other income or a capital injection.
Transfer Dana	Moving money between your own cash/bank accounts.

Draft → Posted

Only Draft transactions can be edited or cancelled.

> **Important**
> A **Posted** cash transaction cannot be cancelled. If you post one by mistake, record an opposite transaction (e.g. a Terima Dana to undo a Kirim Dana) and note the reason.

> **Tip**
> Invoice payments made from Piutang/Hutang and sales-order down payments appear in the account automatically. You do not need to enter them again here.

5.4 Expenses (Biaya)

Biaya records operating expenses and bills that are not purchase invoices (rent, utilities, freight from a third party…). The list shows totals for this month, unpaid (**Belum Dibayarkan**) and paid (**Sudah Dibayarkan**).

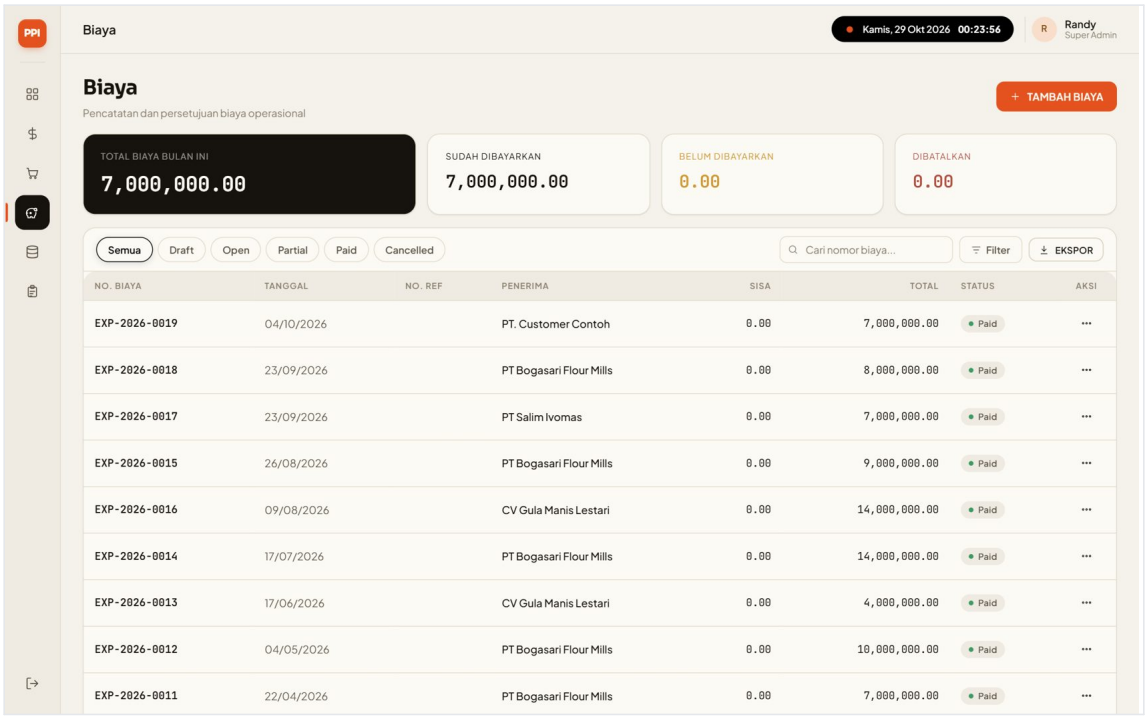

Figure 18. The Biaya list with monthly totals.

Draft → Open → Partial → Paid

Draft and Open expenses can be Cancelled; Partial or Paid ones cannot.

1. Click **Tambah Biaya** and fill in **Tanggal Biaya**, **Supplier / Kontak**, **Termin Pembayaran** / **Jatuh Tempo**, an optional **Nomor Referensi** and notes.
2. Add expense lines (account, description, amount), plus any discount, tax or extra charges.
3. Click **Simpan Draft**, or **Simpan** to confirm it. Opening records the expense in the books and makes it payable under **Hutang**.

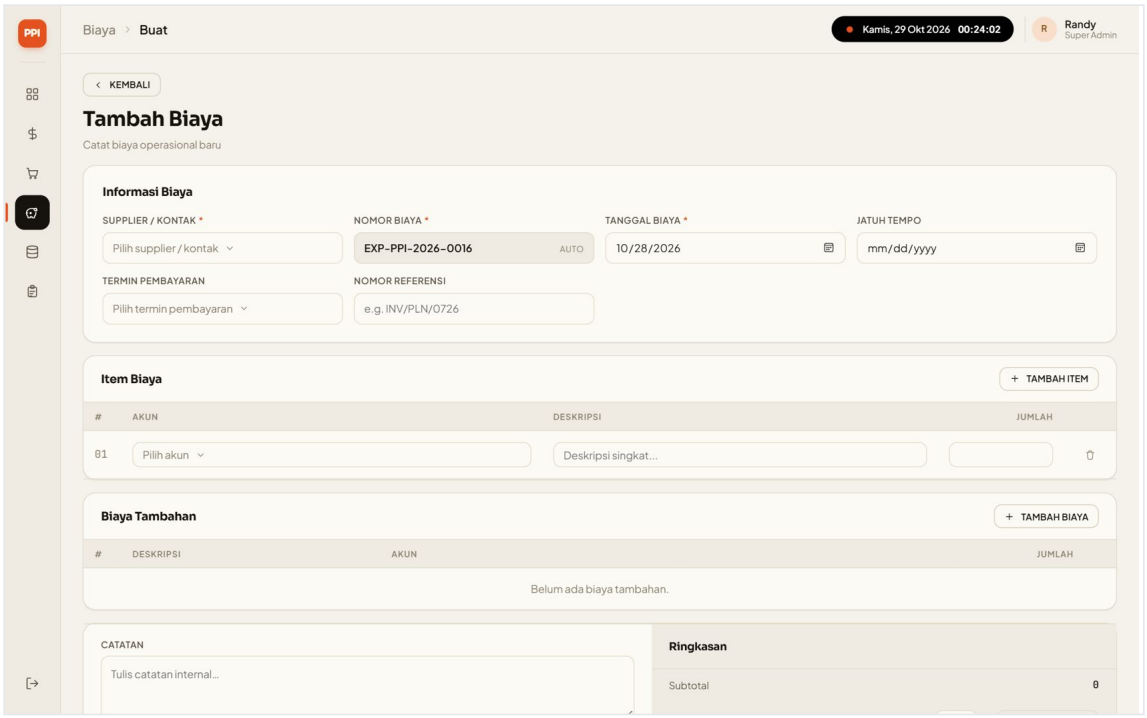

Figure 19. Creating an expense: details, expense lines and additional costs.

Expenses are also created automatically as **Draft** when a goods receipt or delivery is finished with costs billed by **Pihak Ketiga**. Their reference number is the GR or DO number. Review them, then open them so they can be paid.

6. Reports (Laporan)

Open **Laporan** and choose a report under **Pilih Laporan**. You only see reports your role allows. Most reports have date filters and can be exported.

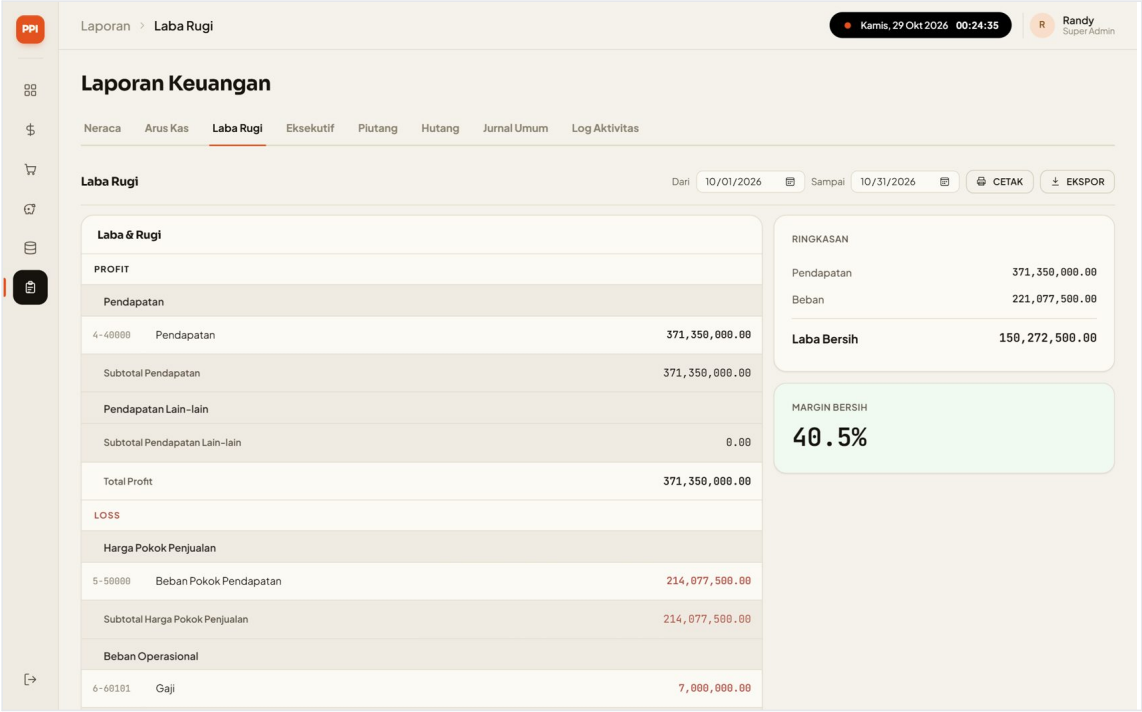

Figure 20. The Laba Rugi report. Switch reports with the tabs at the top; set the period, then CETAK or EKSPOR.

Report	Shows
Neraca (Balance Sheet)	Assets, liabilities and equity at a date.
Laba Rugi (Profit & Loss)	Revenue, COGS, gross profit, operating expenses, other income/expense and net profit for a period.
Arus Kas (Cash Flow)	Cash coming in and going out over a period.
Eksekutif	Summary of key figures for management.
Piutang Dagang	Outstanding customer invoices (receivables aging).
Hutang Dagang	Outstanding supplier invoices and expenses (payables aging).
Jurnal Umum	Every journal entry with its debit and credit lines, including automatic entries and reversals.
Log Aktivitas	Who created, changed or cancelled what, and when.

> **Tip**
> Every confirmed document posts its own journal entry automatically. Use **Jurnal Umum** to trace any number in the financial statements back to the document that created it.

7. Quick Reference

What can be cancelled?

Document	Can be cancelled when	Notes
Sales / Purchase Order	Draft, or Open with no deliveries / receipts (and no invoices)	Down payment is reversed.
Delivery / Goods Receipt	Draft only	Finished documents cannot be cancelled in the current version.
Sales / Purchase Invoice	Draft, or Open with no payment	Void payments first if any exist.
Expense	Draft or Open	Not when Partial or Paid.
Cash & Bank transaction	Draft only	Posted transactions are final.
Payment	Any time, via **Void**	Invoice balance is restored; history is kept.

Typical day-to-day flow

Task	Where
Customer orders goods	Penjualan → Pemesanan Penjualan → Tambah, then Simpan
Ship the goods	Sales order → Buat Pengiriman → edit, pick batches → Selesaikan
Bill the customer	Sales order → Buat Tagihan → edit → Buka
Customer pays	Finance → Piutang → invoice → Tambah Pembayaran
Order from a supplier	Pembelian → Pemesanan Pembelian → Tambah, then Simpan
Goods arrive	Purchase order → Buat Penerimaan → edit, batch numbers → Selesaikan
Supplier invoice arrives	Purchase order → Buat Tagihan → edit → Buka
Pay a supplier or expense	Finance → Hutang → invoice/expense → Tambah Pembayaran
Pay a bill with no invoice	Finance → Biaya (then pay via Hutang), or Kas & Bank → Kirim Dana
Stock count difference	Master Data → Gudang → warehouse → Penyesuaian Stok

Common messages

Message (summary)	What to do
"… berstatus X, tidak dapat diubah menjadi Y"	The action is not allowed in the document's current status. See the status tables above.
"Customer / SO belum memiliki produk … Lengkapi draft SO"	The draft is incomplete. Edit it, fill in the missing fields, then open it again.
"Akun biaya (customer) belum dipilih"	A customer charge on the order has no account. Edit the draft and choose one.
"SO tidak dapat dibatalkan karena sudah memiliki pengiriman atau tagihan"	The order already has deliveries or invoices. Use **Tutup SO** instead.
"Tagihan ini sudah dibatalkan" / already paid	No further action or payment is possible on this invoice.
Stock or batch quantity error when finishing a delivery	The chosen batches do not have enough stock, or batch quantities do not add up to the item quantity.
"Total debit dan kredit tidak seimbang"	An entry does not balance. Check the amounts and account settings, or contact your administrator.
A menu or button is missing	Your role lacks the permission. Ask your administrator.
